

# SECTION 1: Identification of the Substance/Mixture and of the Company/Undertaking

#### **1.1 Product identifier**

| Product Name: | TURBO 3000 ENGINE OIL API: CC/SC SAE 40 |
|---------------|---|
| Product Type: | Liquid                                  |

#### 1.2 Relevant Identified Uses of the Substance or Mixture and Uses Advised Against

| Use of the Substance / Mixture: | Engine Oils   |
|---------------------------------|---|
|                                 | For specific application advice see appropriate Technical Data Sheet or |
|                                 | consult our company representative.                                     |

## 1.3 Details of the Supplier of the Safety Data Sheet

| REXOL FZC, PO Box 52341, Plot 1F-09B, 09B<br>Hamriyah Free Zone, Sharjah, United Arab Emirates |
|--|
| Phone: +971 6 561 8895 Email: info@venomoil.de   |
| 01-DEC-2021  |
| 01-JUL-2022  |
| REXOL FZC  |
|  |

#### **1.4 Emergency Telephone Number**

| Emergency Telephone Number: | United Arab Emirates, Government of Sharjah, Hamriyah Free Zone |
|-----------------------------|---|
|                             | Authority, SAFETY PH NO. +971 6 526 1666 (24x7)                 |
|                             | EMERGENCY PH NO. +971 6 526 2111 (24x7)                         |

# **SECTION 2: Hazard Identification**

## 2.1 Classification of the Substance / Mixture

| Product Definition:   | Mixture  |
|---|--|
| Classification according to<br>Regulation (EC) No. 1272/2008<br>[CLP/GHS] | Not Classified   |
| Classification according to Directive<br>1999/45/EC [DPD]                 | The product is not classified as dangerous according to Directive 1999/45/EC and its amendments.<br>See sections 11 and 12 for more detailed information on health effects and symptoms and environmental hazards. |

#### **2.2 Label Elements**

Signal Word:

No signal words.

| Hazard Statements:              | No known significant effects or critical hazards. |
|---------------------------------|---|
| Precautionary Statements:       |   |
| Prevention                      | Not applicable.                                   |
| Response                        | Not applicable.                                   |
| Storage                         | Not applicable.                                   |
| Disposal                        | Not applicable.                                   |
| Supplemental Label Elements:    | Not applicable.                                   |
| Special Packaging Requirements: |   |
| Containers to be fitted         | Not applicable.                                   |
| with child-resistant            |   |
| fastenings                      |   |
| Tactile Warning of Danger:      | Not applicable.                                   |
|                                 |   |

## 2.3 Other Hazards

| Other Hazards which do not Result in | Defatting to the skin.   |
|--------------------------------------|--|
| Classification:                      | USED ENGINE OILS   |
|                                      | Used engine oil may contain hazardous components, which have the     |
|                                      | potential to cause skin cancer.                                      |
|                                      | See Toxicological Information, section 11 of this Safety Data Sheet. |

# **SECTION 3: Composition/Information on Ingredients**

| Substance / Mixture: | Mixture   |
|----------------------|---|
|                      | Highly refined base oil (IP 346 DMSO extract < 3%). Chemically modified base oil and Proprietary performance additives. |
|                      | This product does not contain any hazardous ingredients at or above regulated thresholds.                               |

# **SECTION 4: First Aid Measures**

## 4.1 Description of First Aid Measures

| Eye Contact:  | In case of contact, immediately flush eyes with plenty of water for at least<br>15 minutes.   |
|---------------|---|
| Eye Contact:  | Eyelids should be held away from the eyeball to ensure thorough rinsing.<br>Check for and remove any contact lenses. Get medical attention.   |
| Skin Contact: | Wash skin thoroughly with soap and water or use recognized skin<br>cleanser. Remove contaminated clothing and shoes. Wash clothing<br>before reuse. Clean shoes thoroughly before reuse. Get medical attention<br>if irritation develops. |
| Ingestion:    | Do not induce vomiting unless directed to do so by medical personnel.<br>Get medical attention if Symptoms occur.   |
| Inhalation:   |   |

## **Material Safety Data Sheet**

If inhaled, remove to fresh air. Get medical attention if symptoms appear. In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.

Protection of First Aiders:

No action shall be taken involving any personal risk or without suitable training.

## 4.2 Most Important Symptoms and Effects, Both Acute and Delayed

See Section 11 for more detailed information on health effects and symptoms.

#### 4.3 Indication of Immediate Medical Attention and Special Treatment Needed

Notes to Physician: See Section 11 for more detailed information on health effects and symptoms.

#### **SECTION 5: Fire Fighting Measures**

#### 5.1 Extinguishing Media

| Suitable Extinguishing Media   | In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray. |
|--------------------------------|--|
| Unsuitable Extinguishing Media | Do not use water jet.  |

#### 5.2 Special Hazards Arising from Substance / Mixture

| Hazards from the Substance or Mixtur           | e In a fire or if heated, a pressure increase will occur and the container may burst.   |
|--|---|
| Hazardous Combustion Products                  | Combustion products may include the following: Carbon Oxides (CO, CO2) (carbon monoxide, carbon dioxide)  |
| 5.3 Advice for Fire Fighters                   |   |
| Special precautions for fire-fighters          | Promptly isolate the scene by removing all persons from the vicinity of<br>the incident if there is a fire. No action shall be taken involving any<br>personal risk or without suitable training.   |
| Special protective equipment for fire-fighters | Fire fighters should wear appropriate protective equipment and self-<br>contained breathing apparatus (SCBA) with a full face-piece operated in<br>positive pressure mode. Clothing for firefighters (including helmets,<br>protective boots and gloves) conforming to European standard EN 469 |

will provide a basic level of protection for chemical incidents.

#### 6.1 Personal precautions, protective equipment and emergency procedures

| For non-emergency personnel | No action shall be taken involving any personal risk or without suitable<br>training. Evacuate surrounding areas. Keep unnecessary and unprotected<br>personnel from entering. Do not touch or walk through spilt material.<br>Floors may be slippery; use care to avoid falling. Put on appropriate<br>personal protective equipment. |
|-----------------------------|--|
| For emergency responders    | If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See   |

#### **6.2 Environmental Precautions**

Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

also the information in "For nonemergency personnel".

#### 6.3 Methods and Material for Containment and Cleaning Up

| Small Spill | Stop leak if without risk. Move containers from spill area. Absorb with an inert material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.  |
|-------------|---|
| Large Spill | Stop leak if without risk. Move containers from spill area. Prevent entry<br>into sewers, watercourses, basements or confined areas. Contain and<br>collect spillage with non-combustible, absorbent material e.g. sand,<br>earth, vermiculite or diatomaceous earth and place in container for<br>disposal according to local regulations. Dispose of via a licensed waste<br>disposal contractor. |

## 6.4 Reference to Other Sections

See Section 1 for emergency contact information.

See Section 5 for firefighting measures.

See Section 8 for information on appropriate personal protective equipment.

See Section 12 for environmental precautions.

See Section 13 for additional waste treatment information.

## **SECTION 7: Handling and Storage**

#### 7.1 Precautions for safe handling

Protective measures Put on appropriate personal protective equipment.

Advice on general occupational Eating, drinking and smoking should be prohibited in areas where this

hygiene

material is handled, stored and processed. Wash thoroughly after handling. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

#### 7.2 Conditions for Safe Storage, Including Any Incompatibilities

Store in accordance with local regulations. Store in a dry, cool and wellventilated area, away from incompatible materials (see Section 10). Keep away from heat and direct sunlight. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Store and use only in equipment/containers designed for use with this product. Do not store in unlabeled containers.

#### 7.3 Specific and End Use(s) Recommendations

See section 1.2 and Exposure scenarios in annex, if applicable.

## **SECTION 8: Exposure Controls / Personal Protection**

#### **8.1 Control Parameters**

Whilst specific OELs for certain components may be shown in this section, other components may be present in any mist, vapor or dust produced. Therefore, the specific OELs may not be applicable to the product as a whole and are provided for guidance only.

Recommended Monitoring Procedures If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment. Reference should be made to monitoring standards, such as the following: European Standard EN 689 (Workplace atmospheres - Guidance for the assessment of exposure by inhalation to chemical agents for comparison with limit values and measurement strategy) European Standard EN14042 (Workplace atmospheres - Guide for the application and use of procedures for the assessment of exposure to chemical and biological agents) European Standard EN 482 (Workplace atmospheres - General requirements for the performance of procedures for the measurement of chemical agents) Reference to national guidance documents for methods for the determination of hazardous substances will also be required.

| Derived No Effect Level | No DNELs/DMELs available |  |
|-------------------------|--------------------------|--|
|                         |                          |  |

## 8.2 Exposure Controls

| Appropriate Engineering Controls                   | Provide exhaust ventilation or other engineering controls to keep the relevant airborne concentrations below their respective occupational exposure limits. All activities involving chemicals should be assessed for their risks to health, to ensure exposures are adequately controlled. Personal protective equipment should only be considered after other forms of control measures (e.g. engineering controls) have been suitably evaluated. Personal protective equipment should conform to appropriate standards, be suitable for use, be kept in good condition and properly maintained. Your supplier of personal protective equipment should be consulted for advice on selection and appropriate standards. For further information contact your national organization for standards. The final choice of protective equipment will depend upon a risk assessment. It is important to ensure that all items of personal protective equipment are compatible. |
|--|---|
| Individual protection measures<br>Hygiene measures | Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location.   |
| Respiratory Measures                               | Respiratory protective equipment is not normally required where there is<br>adequate natural or local exhaust ventilation to control exposure. In case<br>of insufficient ventilation, wear suitable respiratory equipment. The<br>correct choice of respiratory protection depends upon the chemicals<br>being handled, the conditions of work and use, and the condition of the<br>respiratory equipment. Safety procedures should be developed for each<br>intended application. Respiratory protection equipment should therefore<br>be chosen in consultation with the supplier/manufacturer and with a full<br>assessment of the working conditions.  |
| Eye / Self Protection                              | Safety glasses with side shades   |
| Skin Protection                                    |   |
| Hand Protection                                    | General Information:<br>Because specific work environments and material handling practices<br>vary, safety procedures should be developed for each intended<br>application. The correct choice of protective gloves depends upon the<br>chemicals being handled, and the conditions of work and use. Most<br>gloves provide protection for only a limited time before they must be<br>discarded and replaced (even the best chemically resistant gloves will<br>break down after repeated chemical exposures). Gloves should be<br>chosen in consultation with the supplier / manufacturer and taking<br>account of a full assessment of the working conditions.  |
|  |   |

Breakthrough time:

|                                 | Breakthrough time data are generated by glove manufacturers under<br>laboratory test conditions and represent how long a glove can be<br>expected to provide effective permeation resistance. It is important when<br>following breakthrough time recommendations that actual workplace<br>conditions are considered. Always consult with your glove supplier for<br>up-to-date technical information on breakthrough times for the<br>recommended glove type. Our recommendations on the selection of<br>gloves are as follows:  |
|---------------------------------|---|
|                                 | Continuous contact:<br>Gloves with a minimum breakthrough time of 240 minutes, or >480<br>minutes if suitable gloves can be obtained. If suitable gloves are not<br>available to offer that level of protection, gloves with shorter<br>breakthrough times may be acceptable as long as appropriate glove<br>maintenance and replacement regimes must be determined and<br>rigorously followed.   |
|                                 | Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks.  |
|                                 | <ul> <li>For Example:</li> <li>Thinner gloves (down to 0.1 mm or less) may be required where a high degree of manual dexterity is needed. However, these gloves are only likely to give short duration protection and would normally be just for single use applications, then disposed of.</li> </ul>  |
|                                 | • Thicker gloves (up to 3 mm or more) may be required where there is a mechanical (as well as a chemical) risk i.e. where there is abrasion or puncture potential.  |
| Skin and Body:                  | Use of protective clothing is good industrial practice. Personal protective<br>equipment for the body should be selected based on the task being<br>performed and the risks involved and should be approved by a specialist<br>before handling this product. Cotton or polyester/cotton overalls will only<br>provide protection against light superficial contamination that will not<br>soak through to the skin. Overalls should be laundered on a regular basis.<br>When the risk of skin exposure is high (e.g. when cleaning up spillages or if<br>there is a risk of splashing) then chemical resistant aprons and/or<br>impervious chemical suits and boots will be required. |
| Refer to Standards              | Respiratory protection: EN529<br>Gloves: EN420, EN374<br>Eye protection: EN166  |
| Environmental Exposure Controls | Emissions from ventilation or work process equipment should be checked<br>to ensure they comply with the requirements of environmental protection<br>legislation. In some cases, fume scrubbers, filters or engineering<br>modifications to the process equipment will be necessary to reduce<br>emissions to acceptable levels.  |

## 9.2 Other Information

No Additional Information

## **SECTION 10: Stability and Reactivity**

#### **10.1 Reactivity**

No specific test data available for this product. Refer to Conditions to avoid and Incompatible materials for additional information.

## 10.2 Chemical Stability

This product is stable.

#### **10.3 Possibility of Hazardous Reactions**

Under normal conditions of storage and use, hazardous reactions will not

occur.

Under normal conditions of storage and use, hazardous polymerization will not occur.

## **10.4 Conditions to Avoid**

Avoid all possible sources of ignition (spark or flame).

#### **10.5 Incompatible Materials**

Reactive or incompatible with Oxidizing Materials

#### **10.6 Hazardous Decomposition Products**

Under normal conditions of storage and use, hazardous decomposition products should not be produced.

## **SECTION 11: Toxicological Information**

#### **11.2 Information on Toxicological Effects**

| <b>Acute Toxicity Estimates</b><br>Petroleum derived calcium salt<br>61789-86-4 | <b>Route</b><br>Oral<br>Dermal<br>Inhalation (dusts and mists)        | <b>ATE Value</b><br>> 5000mg/kg<br>> 4000 mg/kg<br>418.6 mg/l |

| Information on the likely routes of exposure                                    | Routes of entry anticipated: Derma                                    | l, Inhalation.  |
| Potential Acute Health Effects<br>Inhalation                                    | Exposure to decomposition produce effects may be delayed following ex | cts may cause a health hazard. Serious<br>xposure.            |
| Ingestion   | No known significant effects or critical hazards.                     |   |
| Skin Contact  | Defatting to the skin. May cause skin dryness and irritation.         |   |
| Eye Contact   | No known significant effects or critical hazards.                     |   |
|   | No specific data  |   |
|   | No specific data  |   |
|   | Adverse symptoms may include i  | rritation, dryness, cracking                                  |
|   | No specific data  |   |

Over exposure to the inhalation of airborne droplets or aerosols may cause irritation of the respiratory tract.

Ingestion of large quantities may cause nausea and diarrhea. Prolonged or repeated contact can defat the skin and lead to irritation and/or dermatitis.

Potential risk of transient stinging or redness if accidental eye contact occurs.

Used Engine Oils:

Combustion products resulting from the operation of internal combustion engines contaminate engine oils during use. Used engine oil may contain hazardous components, which have the potential to cause skin cancer. Frequent or prolonged contact with all types and makes of used engine oil must therefore be avoided and a high standard of personal hygiene maintained.

No know significant effects or critical hazards.

# **SECTION 12: Ecological Information**

## 12.1 Toxicity

Environmental Hazard

Not classified as dangerous.

## **12.2 Persistence and Degradability**

Partially biodegradable.

#### **12.3 Bio Accumulative Potential**

This product is not expected to bio accumulate through food chains in the environment.

#### **12.4 Mobility in Soil**

Soil / Water partition coefficient (KOC) Not available

Mobility

Spillages may penetrate the soil causing ground water contamination

## 12.5 Result of PBT and vPVB Assessment

| PBT                          | Not applicable   |
|------------------------------|--|
| vPVB                         | Not applicable   |
| 12.6 Other Adverse Effects   |  |
| Other ecological information | Spills may form a film on water surfaces causing physical damage to organisms. Oxygen transfer could also be impaired. |
| SECTION 12 Disposal Consider | ations   |

# SECTION 13: Disposal Considerations

## **13.1 Waste Treatment Methods**

| Methods of Disposal | Where possible, arrange for product to be recycled. Dispose of via an authorized person/ licensed waste disposal contractor in accordance with local regulations. |   |  |
|---------------------|---|---|--|
|                     | Waste Code  | Waste Designation   |  |
